

SANS SOUCI

Designs 2023

Contrasts and perspectives

Sans Souci is starting a new chapter and we want you to be a part of it. This catalogue is dedicated to our new design direction and brand values – our response to the most pressing questions our industry is facing.

The new collections, 15 in total, are testament to our commitment to design and innovation. Launched to coincide with the biggest design celebrations in the calendar – Fuorisalone and EuroLuce – each listed in this catalogue is the culmination of a significant creative journey. Now, we invite you to become part of the process.

Our brand embraces both the contrasts and equilibrium in the space between different perspectives. The space between luxury and our responsibility to the planet, between craftsmanship and sophisticated technologies, between classical design and contemporary ideas.

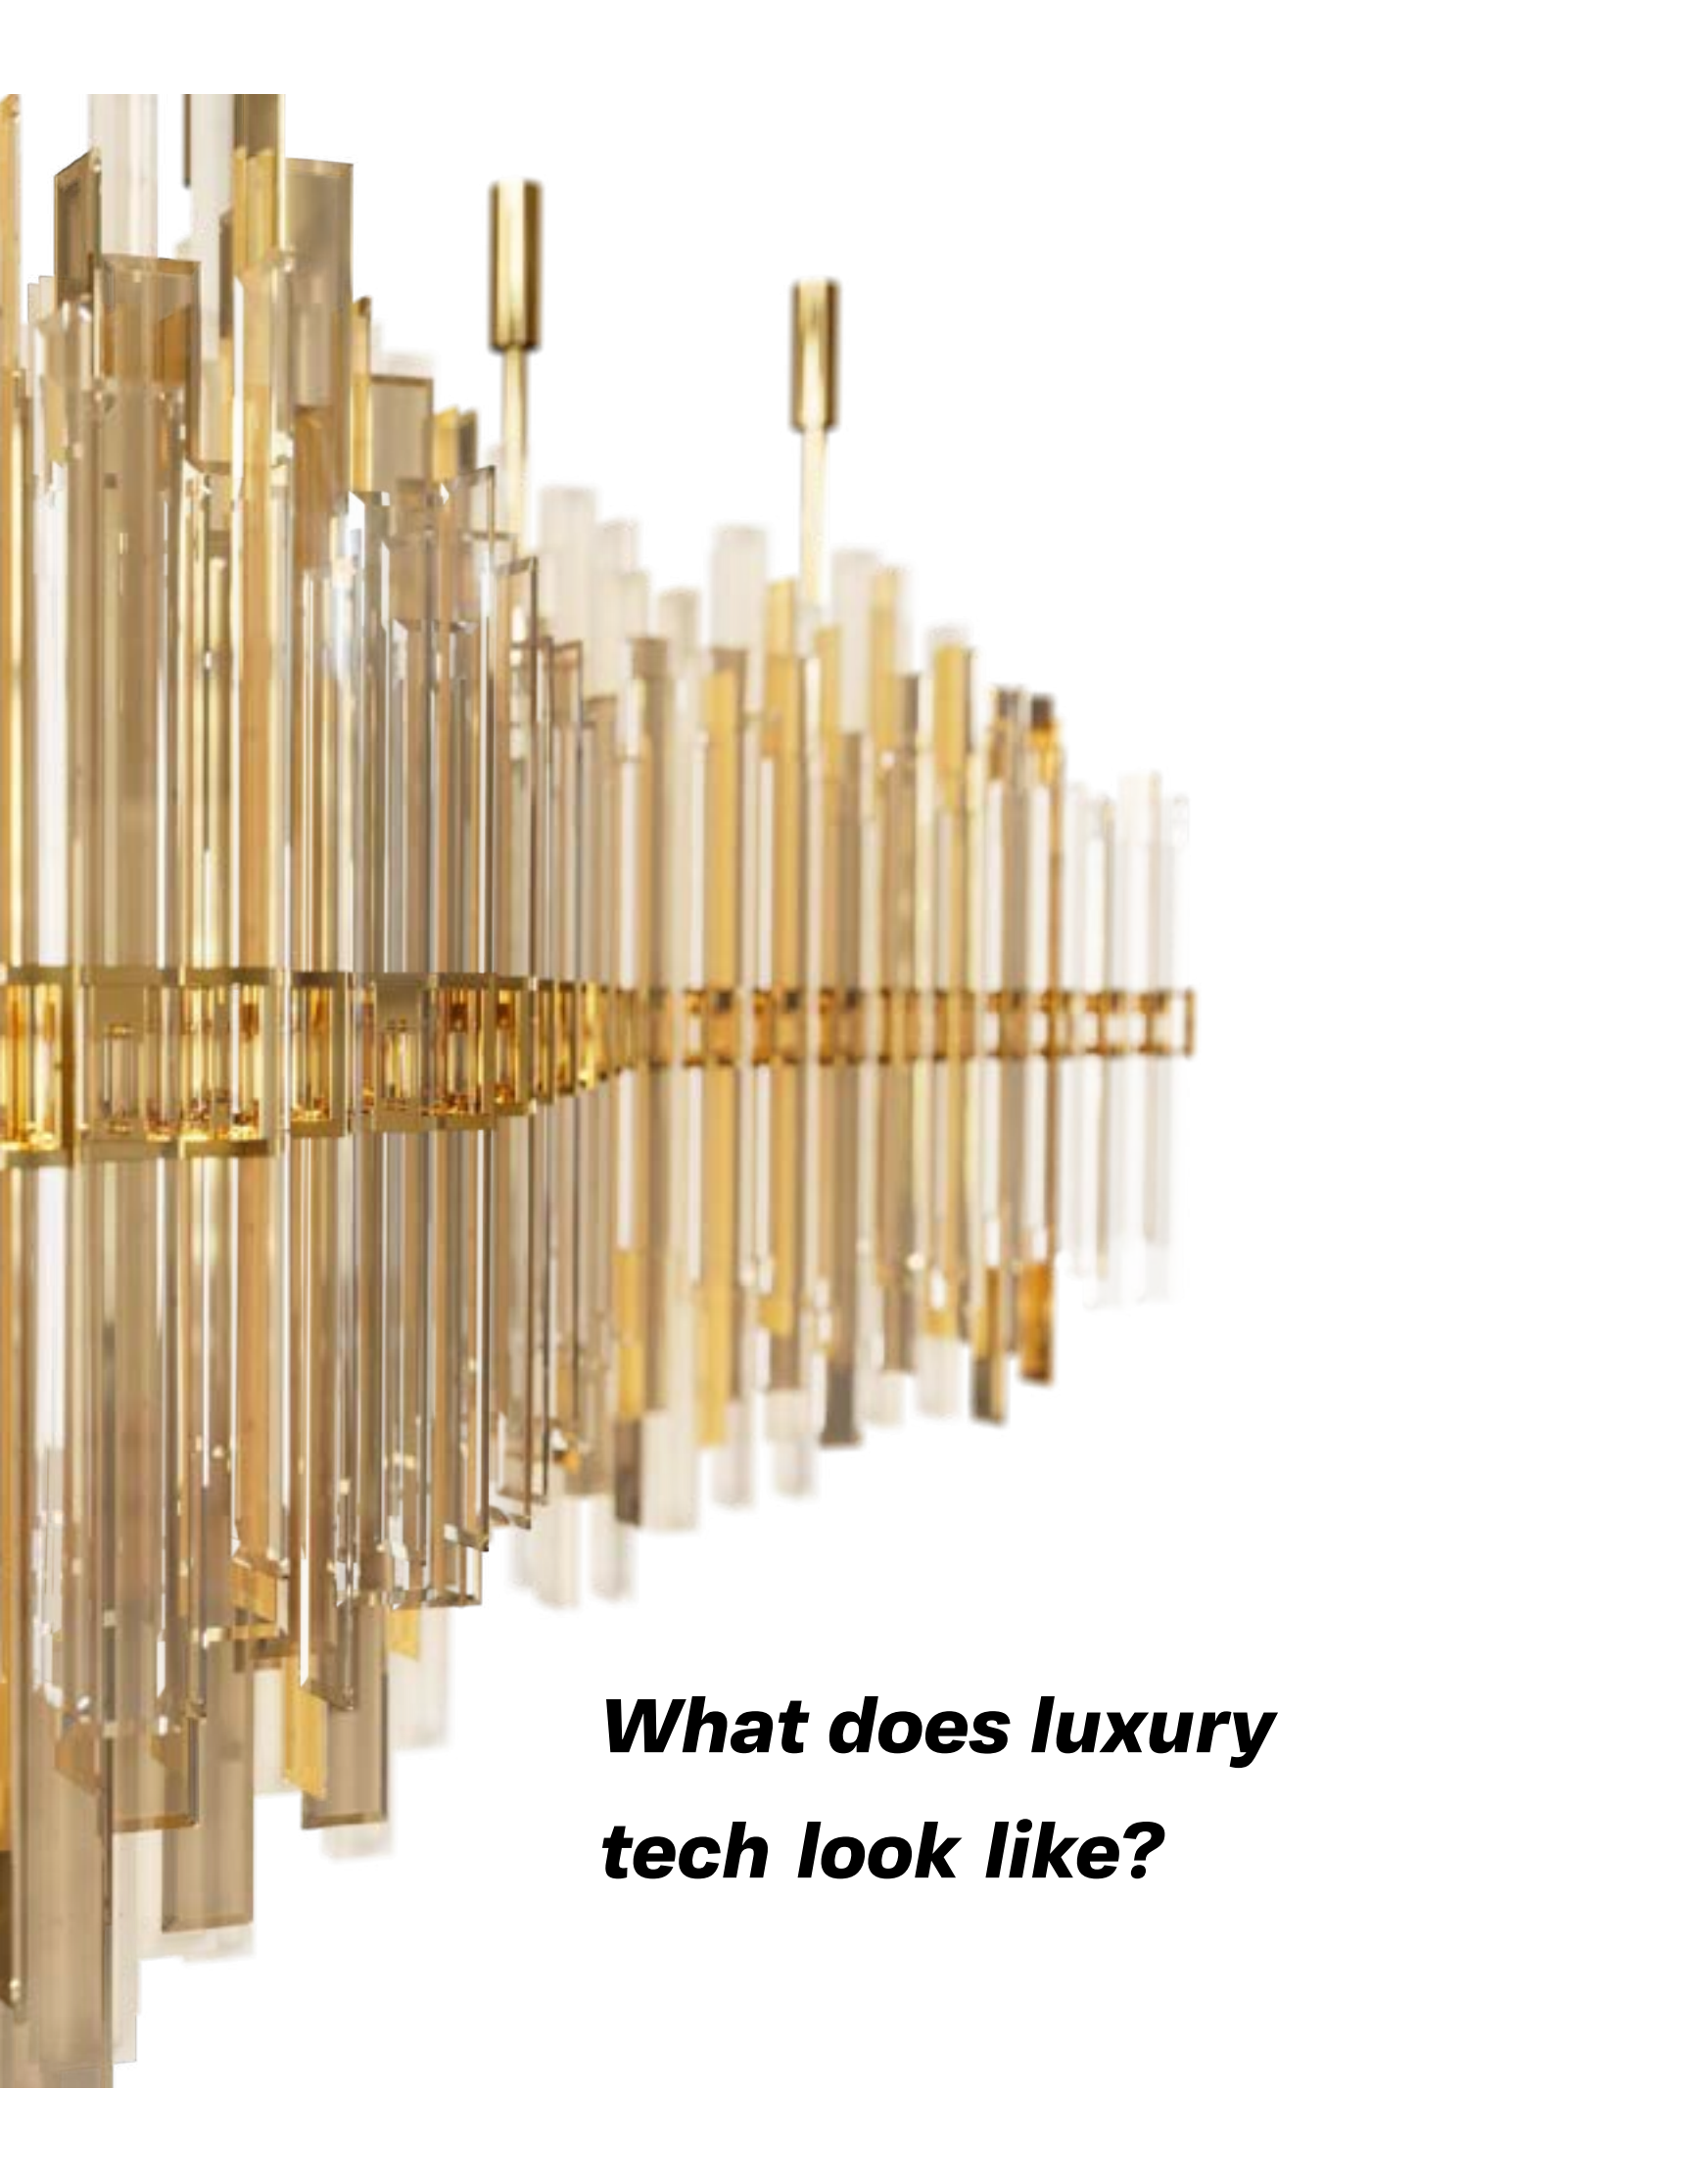

We understand the truth that contrast is positive. It is where we find the strongest relationships and the most surprising discoveries. It is where innovation and beauty live. It is where we create. So don't pick a side, come explore and enjoy different perspectives. We don't have all the answers but maybe you will.

Martin Cháb, owner & CEO

The Harmony of Contrast

The concept central to our brand and the focus of our 2023 Milan exhibition – The Harmony of Contrast – combines diverse elements and ideas, challenging your assumptions. Our new product development and design approach is part of a creative journey where contrasting perspectives meet.

SUSTAINABILITY AND PRODUCTION

TECHNOLOGY AND CRAFTSMANSHIP

CONTEMPORARY AND CLASSICAL DESIGN

Journey through this catalogue to see how we bring together these different approaches and ideas. You may find more questions than answers as you explore.

to our senses.**

ABOUT HARK

The HARK collection uses exquisite crystal cuboids together with cutting-edge lighting technology, allowing these pieces to respond to the sounds around them. The strong shapes in sleek gold and crystal finishes play with light in a different way depending on the aspect and sound, creating an artful piece that responds to your space.

***Can light be a shape?
Can it be a feeling?***

JIŘÍ KRIŠICA

“There are no rules for design. That’s what makes it design.”

There are 15 new collections being launched. This is a lot of new products – how did you manage it?

It has been a long journey. We began preparations early last year, developing the strategy and concept for the fair. We had a clear ambition for this fair and went out to internal and external designers for their designs. We received dozens of design’s, the best of which we are showing here now. I won’t lie, the last six months has been demanding for everyone working across the company. With a big task it’s all about continuous, clear communication across the team. So I want to thank each member of our innovation team for their hard work.

How do you select the best products? How do you know what will be successful?

We are constantly monitoring and mapping the market to see how our products perform in relation to design trends, quality and price. This can depend on the location. Each culture has its own preferences and requirements which we have to consider when designing. Our analysis informs our ideas as we develop new products. For example, we recognise a popular design theme or motif across our markets and transform it into a glass installation, which we did with our much-loved LEAVES collection.

What size is your team?

The company is growing. Currently our design team consists of 17 members. Most designers are based in our headquarters in the Czech Republic. There are two in our Dubai office.

Looking to the future, what would you like to achieve with your team?

A respected design partner that interior design companies think of when they have a project. We want to work with more new interior and architectural studios on bespoke projects, so we are recognised for the fresh design ideas we bring, which can transform spaces.

“Most of the time the detail is the element which can’t be replaced.”

Is any design truly new?

From my point of view as a designer, I am looking for the unique. When I develop a design, I do research and if anything on the market is the same, I avoid it. You always can find something similar but is it our job to make it better and more attractive than the others. We take pride in creating collections that are unique and unexpected, which was the case with some of our most recent collections – RAW, GEM, HEARTS.

Is inspiration just imitation?

Not only in art, but in all specializations you can find something similar to your product if you look hard enough. Personally, inspiration is a way of learning and evolving ideas. If we look at history, somebody invented something new and future generation’s then take that idea and transform it to something new. It is important we don’t forget our past. We’re taught not to repeat the same mistakes, and it’s the same for design. Why should I make the same mistake others have made before? I just pick out the meaningful information and inspiration and apply it to my designs. Inspiration is a combination of the workable techniques and technology from each period, together with original thought.

Can hedonism be healthy?

Some philosophers claim that pleasure is the highest, good and proper aim of human life. In our vision we want that pleasure to last by creating a luxury offering that delivers long-term value for customers. We focus on quality and sustainability at every step of the process, so you can surround yourself with decadent designs without guilt.

Can minimalist be opulent?

It definitely can be for some interiors and clients we have worked with. Spaces can be minimalistic in terms of architecture but with opulent features such as high-end lighting and furniture etc. That is one of the reasons that I have a team of designers with different and diverse styles. They are able to create both minimalistic and decorative designs.

Does detail need to be intentional?

Detail is an integral part of design. Most of the time the detail is the element which can't be replaced. It can be functional, decorative, or both. If the designers do not take into account the details in the first phase, then it is difficult for them to get right in the final design. A nice example is our collection HEARTS. Without molded metal caps, the glass shapes would appear unfinished. They also have the function of covering the attachment with cables and lighting source. It seems like a small detail but the design doesn't work without it.

BRE

EZE

**Capturing the organic
artistry of leaves
floating on the air.**

A handblown crystal leaf, part of the BREEZE collection, is shown hanging from a thin wire. The leaf is elongated and tapers to a point, with a textured, crystalline surface. It is set against a light, neutral background.

ABOUT BREEZE

Taking inspiration from the art of the earth, the BREEZE collection uses designs and colour palettes from the natural world. Handblown crystal leaves finished in green and golden hues can be combined in a range of formations to create the perfect aura for your space.

ABOUT VINE

The VINE collection is made up of hand blown crystal components shaped like vine leaves and finished in opal mist, sandblasted opal and bronze. These delicate leaves can be fitted around striking bronze branches to add bold structure to the pieces. Inspired by the precious grapevine, installations can be arranged in a series of different formations to fit the space.

***Can craft and technology
coexist in harmony?***

Nature and technology

ogy

**The challenge of the century and of our generation.
Sustainability.**

CAN YOU RESPECT THE EARTH AND

EMBRACE TECHNOLOGY?

CAN LUXURY PRODUCTS BE SUSTAINABLE?

It is a challenge we take seriously. As a business that operates in the luxury sector, uses emerging technologies, and requires energy to create our glass components, we recognise the impact our decisions have on the natural world.

We are committed to respecting the planet in the practices we use in our production processes and facilities. We have already taken action to reduce energy consumption and our carbon emissions.

- 1. Moved operations to a new energy efficient production facility in Cvikov.**
- 2. Introduced heat recovery devices to use the heat emitted by production processes to heat the facility.**
- 3. Introduced new, energy efficient equipment for surface coating components.**

But we know there is more to do. We have a series of further measures we will be implementing.

- 1. Photovoltaic panels used generate energy for our primary production facility in Cvikov.**
- 2. Environmental audit to inform our processes and minimise the carbon footprint of our products.**
- 3. Increased energy efficiency of all our buildings, switching to electricity rather than fossil fuels.**

Technology and light

Lighting engineering is a world of its own but its technologies and techniques impact the space we live in and our wellbeing.

There are not enough pages to include all the knowledge and knowhow of our lighting specialists, but we wanted to share our top guiding principles for how to use lighting technologies to create perfect pieces.

Sans Souci's five rules for lighting technology in 2023.

- 1. CCT LED lights with changeable chromatic temperature between 2700K to 6500K.**
- 2. Integrated LED modules should always be tailored to the customer needs. It needs to fit the chandelier and complement the space.**
- 3. For integrated LED module sources Sans Souci works with the best, cooperating with suppliers including SAMSUNG, CREE and OSRAM.**
- 4. For integrated light sources Sans Souci works with SORRA, UL certification as well as SEGULA.**
- 5. Each chandelier deserves the best lighting.**

ABOUT BOND

The BOND collection reflects and transmits light differently depending on the natural light that surrounds it, creating a different ambience depending on the time of day or season. Its contemporary design features two artfully crafted glass pendants - one convex, one concave - bonded together with an integrated light source and finished with metal nanocoating.

Work with us

Together we will create captivating pieces that last a lifetime.

Our team of expert designers, craftspeople, and technologists collaborate to ensure quality and artistry at every step of the creative and production process.

DESIGN FIRST

Our designers take your vision and inspiration and translate it into a concept for your space. Simple sketches become 3D models and precise construction illustrations to bring your unique design to life.

CREATION

Our design studio and production team collaborate with you to select the best styles, materials and finishes for your project. We share samples and prototypes as your piece takes shape.

INSTALLATION

Once your piece is complete, our team of expert installers is on site to perfectly position the installation and create the best formation for your space.

LIFELONG CARE

Our experts are there to support you with maintenance and resolve any issues to ensure your piece last a lifetime.
